

week08-04-cycles

March 5, 2025

Consider a *cycle*

```
[11]: import numpy as np
import numpy.linalg as npl
from graphviz import Digraph

def cycle(n=5, labels=None):
    if labels==None:
        labels= n*[1]
    cyc = Digraph()
    cyc.attr(rankdir='LR')
    I = list(range(n))

    for i in I:
        cyc.node(f"{i}")

    for i in I:
        cyc.edge(f"{i}", f"{np.mod(i+1,n)}", f"{labels[i]}")

    return cyc

cycle()
```

[11]:

What is the corresponding matrix P ?

Well, we can represent the a graph by a dictionary whose keys are pairs (a,b) and whose value is the probability of the corresponding state transition.

```
[7]: cd = { (n,(n+1) % 5):1 for n in range(5) }
cd
```

```
[7]: {(0, 1): 1, (1, 2): 1, (2, 3): 1, (3, 4): 1, (4, 0): 1}
```

```
[8]: def lookup(pair,dict):
      if pair in dict.keys():
          return dict[pair]
      else:
          return 0

      def mat(dict):
          return np.array([[ lookup((i,j),dict) for j in range(5)] for i in range(5)])

      M=mat(cd)
```

```
[ ]: import numpy.linalg as npl
      e_vals, e_vects = npl.eig(M)
      e_vals
```

Notice that every eigenvalue of the matrix M is 0. In particular, the conclusion of the *Frobenius-Perron Theorem* does not hold for M.

Adding an extra edge $4 \rightarrow 4$ fixes the problem!

```
[3]: acd = { (n,(n+1) % 5):1 for n in range(5) }
      acd[(4,4)] = .5
      acd[(4,0)]= .5
      acd
```

```
[3]: {(0, 1): 1, (1, 2): 1, (2, 3): 1, (3, 4): 1, (4, 0): 0.5, (4, 4): 0.5}
```

```
[9]: Ma=mat(acd)
      Ma
```

```
[9]: array([[0. , 1. , 0. , 0. , 0. ],
           [0. , 0. , 1. , 0. , 0. ],
           [0. , 0. , 0. , 1. , 0. ],
           [0. , 0. , 0. , 0. , 1. ],
           [0.5, 0. , 0. , 0. , 0.5]])
```

```
[12]: ae_vals,ae_vecs = npl.eig(Ma)
      ae_vals
```

```
[12]: array([ 1.          +0.j          ,  0.37103484+0.80377194j,
           0.37103484-0.80377194j, -0.62103484+0.50229651j,
           -0.62103484-0.50229651j])
```

```
[14]: [ float(abs(x)) for x in ae_vals ]
```

```
[14]: [0.99999999999999989,
      0.8852774620837582,
```

0.8852774620837582,
0.7987402949603679,
0.7987402949603679]
